

3.1 Introduction.....	69
ATP and NADH: Energy Currency for Cells.....	69
3.2 Use Versus Storage.....	70
3.3 Glucose Metabolism.....	71
Use of Glucose.....	71
Storage and Release of Glucose.....	74
Synthesis of Glucose.....	74
3.4 Fatty Acid Metabolism.....	76
Use of Fatty Acids.....	76
Storage and Release of Fatty Acids.....	77

4.1 Introduction.....	95
4.2 Separating Compounds.....	96
Extraction.....	96
Distillation.....	97
Crystallization.....	97
Chromatography.....	98
Separation and Purification of Nucleic Acids and Peptides.....	100

3.5 Protein Metabolism.....	79
3.6 Regulation of Metabolism.....	81
Glucose Supply.....	81
Glucose Demand.....	81
Hormones Communicate Glucose Levels.....	81
3.7 Energy: ATP and NADH.....	85
NADH and the Citric Acid Cycle.....	87
ATP and the Electron Transport Chain.....	88
3.8 Metabolic Disorders.....	90

4.3 Identifying Molecules: Spec.....	103
Spectroscopy.....	103
Mass Spectrometry.....	110
4.4 Genetic Techniques.....	113
Nucleic Acid Manipulation.....	113
Recombination and Cloning.....	114
Sequencing and Function.....	118
Practical Applications of Genetic Techniques.....	120
Safety and Ethics of Genetic Techniques.....	121
